

**ON-FIELD INOCULATION FOR THE DECOMPOSITION OF CROP RESIDUE
IN LOWLAND RICE PRODUCTION**

ORLANDO NIEVERA LANDINGIN JR.

An Undergraduate Thesis Manuscript Submitted to the Faculty of the Department of Soil
Science, College of Agriculture, Central Luzon State University
Science City of Muñoz, Nueva Ecija, Philippines
in Partial Fulfillment of the Requirements
for the Degree of

**BACHELOR OF SCIENCE IN AGRICULTURE
(Soil Science)**

JANUARY 2020

ACCEPTANCE SHEET

This undergraduate thesis entitled " **ON-FIELD INOCULATION FOR THE DECOMPOSITION OF CROP RESIDUE IN LOWLAND RICE PRODUCTION.**" prepared and submitted by **ORLANDO N. LANDINGIN JR.**, in partial fulfillment of the requirements for the degree of **BACHELOR OF SCIENCE IN AGRICULTURE (SOIL SCIENCE)**, is hereby accepted:

FERNAN T. FIEGALAN, MSc.

Adviser

8/2/18/2019

Date Signed

MARIA LUISA T. MASON, Ph.D.

Critic

1/6/2020

BIOGRAPHICAL SKETCH

Orlando N. Landingin Jr. was born on December 16, 1998 in Ilog Baliwag, Sto. Rosario Sto, Domingo Nueva Ecija. He is the first child of the two children of Mr. Orlando Landingin Sr. and Mrs. Meddie Landingin.

He finished his elementary education at the Curva Elementary School on 2011 and his secondary education at the Sto. Domingo National Trade School on 2015.

The author pursued his college degree at Central Luzon State University in 2015 as Bachelor of Science in Agriculture. On 2017, he completed the Certificate of Agricultural Science.

He became a member of college base organization, the Soil Science Society (SSS), and proud member of Iglesia Ni Cristo (Church of Crist).

ACKNOWLEDGEMENT

The author wishes to express his profound and sincere gratitude to the following persons and institution that have provided assistance for the completion of this thesis;

To Mr. Fernan T. Fiegalan, his adviser, for his guidance, support, valuable suggestion and advise during the conduct of this thesis;

To Mam Florida C. Garcia, for her valuable suggestion, brilliant ideas, moral support and constant encouragement throughout the conduct of this study;

To Ate Sheryl Marcha for her kindness, assistance and patience for helping the author in the laboratory works, thank you very much to her. Without your presence my study is not conducted very well;

To Department of Agriculture Regional Field Office off Region 3 for their assistance given to the author for access on their laboratory technologies;

The Department of Soil Science Faculty and staff, to Dr. Ernesto A. Martin, former Dean of the College of Agriculture;

To Kersey Muyot and Emmanuel Landingin, for helping the author in the rice residue collection;

To Maranatha, Amiel, Gel, Jaymie, Mariella, Richard, Bunao bulataw, Raphael, Kupal Loyd, Mark Angelo, Jomari, Ellen, Kuya Henreck, classmate and friends for their support and free help during the data gathering;

And most of all, THANKS to our Almighty GOD, you're the best.

Abstract

LANDINGIN JR, ORLANDO, N., Department of Soil Science, College of Agriculture, Central Luzon State University, Science City of Munoz, Nueva Ecija, Philippines, **December 2019, ON-FIELD INOCULATION FOR THE DECOMPOSITION OF CROP RESIDUE IN LOWLAND RICE PRODUCTION.**

Adviser: FERNAN T. FIEGALAN, M. Sc.

Recycling of crop residues in agriculture through the use different decomposer can change microbial processes, which affect nutrient availability and hence crop yield. In depth studies on the characteristic of crop residue decomposition are of great importance for achieving sustainable agricultural development. The aim of the study was to determine the mass loss and chemical changes during the decomposition of crop residues in an open field; determine the effect of composted crop residue in soil properties; and quantify the rate of decomposition of crop residue by the different biological decomposers. Decomposition of crop residue was studied by using three different treatments, (T1) Control (T2) *Collembola*, (T3) *Trichoderma*, and (T4) Effective Microorganism. Low land rice production located at Brgy. Palusapis, Science City of Munoz, Nueva Ecija was the experimental site used in the study.

Mass loss of crop residue decreased gradually as the decomposition rate increased over time. The parameters in mass loss showed that treatment with *Collembola*, *Trichoderma*, and EM have no significant difference from each other. However, control (T1) showed a significant difference from the other treatments, wherein treatment with *Collembola* (T2) had the lowest mass loss.
