

DEVELOPMENT OF FISH DRYER-SMOKER

**BRIONES, MARK BERWIN M.
DELOS SANTOS, CHRISTIAN C.**

An Undergraduate Thesis Submitted to the Faculty of the Department of Agricultural
And Biosystems Engineering, College of Engineering, Central Luzon
State University, Science City of Muñoz, Nueva Ecija, Philippines
in Partial Fulfillment of the Requirements for
the Degree of

**BACHELOR OF SCIENCE IN AGRICULTURAL AND BIOSYSTEMS
ENGINEERING
(AB PROCESS ENGINEERING)**

FEBRUARY 2024

ACCEPTANCE SHEET

This undergraduate thesis entitled “**DEVELOPMENT OF FISH DRYER-SMOKER**” prepared and submitted by **MARK BERWIN M. BRIONES and CHRISTIAN C. DELOS SANTOS**, in partial fulfillment of the requirements for the degree of **BACHELOR OF SCIENCE IN AGRICULTURAL AND BIOSYSTEMS ENGINEERING (AB PROCESS ENGINEERING)**, is hereby accepted:

EFREN A. DELA CRUZ, Ph.D.
Member, Advisory Committee

JANUARY 18, 2024
Date Signed

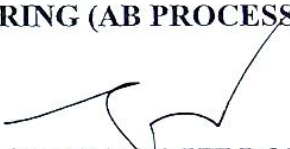

ROY SEARCA JOSE P. DELA CRUZ, Ph.D.
Member, Advisory Committee

JANUARY 18, 2024

BIOGRAPHICAL SKETCH

The author, Christian Castro Delos Santos is son of Mr. Domingo O. Delos Santos and Mrs. Rosemarie C. Delos Santos. He was born on the 20th of March in the year of our Lord 2000 at Cabanatuan City, Nueva Ecija. He is 23 years old and resides in Cuyapa, Gabaldon, Nueva Ecija.

At the age of six, he started his elementary education at Cuyapa Elementary School and graduated in March 2021 as a Class Valedictorian. He took his junior secondary education at the Nueva Ecija University of Science and Technology (NEUST) Gabaldon Campus and achieved his diploma with high honors in April 2016.

He continued his senior secondary education by taking Science, Technology, Engineering, and Mathematics (STEM) Academic Strand at Central Luzon State University and finished his senior secondary education in June 2018.

In 2018, he pursued his college degree, taking the Bachelor of Science in Agricultural and Biosystems Engineering for his tertiary education at Central Luzon State University with a major in AB Process Engineering.

BIOGRAPHICAL SKETCH

The author, Mark Berwin Maraña Briones, was born on March 21, 2000, and resides in Caanawan, San Jose City, Nueva Ecija. He is the eldest son among the three children of Mr. Robert C. Briones and Mrs. Agnes M. Briones.

He graduated from his elementary education in 2012 at St Joseph Elementary School in San Jose City, Nueva Ecija. He completed Junior high school at St Joseph High School in 2016. He took up the academic strand of Science, Technology, Engineering, and Mathematics (STEM) at the senior high school level, graduated in 2018, and received an award from St. Joseph School.

He is now taking up a Bachelor of Science in Agricultural and Biosystems Engineering, majoring in Process Engineering at Central Luzon State University.

ACKNOWLEDGEMENT

First and foremost, the authors give praise and endless gratitude to Jesus Christ, our Lord and Savior, for giving them enough wisdom, strength, and guidance. Blessing them with everything they needed and allowing them to finish this study, the authors give all the credit to Him.

The authors would like to express their heartfelt gratitude and appreciation to everyone who helped and contributed to completing their study. This was only possible with the help of the following individuals the author desired to acknowledge:

To their adviser, Mr. Ruel G. Peneyra, M.Sc., for his unwavering support, guidance, and invaluable insights throughout the research process. His expertise and encouragement have been instrumental in shaping this work. They extend their deepest gratitude for his patience and understanding of their slow but steady process.

To the members of their thesis committee, Mr. Efren Dela A. Cruz, Ph.D., and Mr. Roy Searca Jose P. Dela Cruz, Ph.D., for their constructive feedback and thoughtful suggestions that significantly enhanced the quality of this thesis.

To Mrs. Janet O. Saturno M.Sc., for her willingness to assist in providing a research facility and a conducive learning environment that was critical to the successful completion of their study.

To Ms. Mary Chris B. Buencamino, for her technical assistance in the laboratory. Their skillful execution of microbial assays and data collection played a pivotal role in generating reliable and meaningful findings.

To Mrs. Geraldine T. Gantioque, Ms. Charlene Jade Cabral, and Ms. Jamie R. Revollido of the Department of Food Science and Technology in CLSU for sharing their ideas and thoughts for the betterment of the study. Also, for analyzing the data needed for this study.

To their family for giving them love and support through the process of conducting this study and through the years of their college education.

Lastly, to Ms. Jamie M. Chioco and our friends for motivating and pushing them to reach their goals and constantly reminding them about their capabilities and strengths when it is crucial, for the constant support since day one.

ABSTRACT

DELOS SANTOS, CHRISTIAN C., and BRIONES, MARK BERWIN M.
Department of Agricultural and Biosystems Engineering, College of Engineering, Central Luzon State University, Science City of Muñoz, Nueva Ecija, **FEBRUARY 2024.**
DEVELOPMENT OF FISH DRYER-SMOKER

Adviser: RUEL G. PENEYRA, M.Sc.

The study aimed to design, fabricate, and evaluate a Fish Dryer-Smoker producing high-quality and safe smoked fish. A proposed fish dryer-smoker was fabricated, and its drying and smoking performance was evaluated in terms of drying capacity, moisture reduction rate, and smoking capacity. The smoked fish produced using Fish Dryer-Smoker was evaluated using physicochemical, microbial, and PAH analysis.

The experimental design involved a 2-factor Completely Randomized Design, considering furnace blower speeds (16 m/s, 12 m/s, and 8 m/s) and smoke generator blower speeds (16 m/s, 12 m/s, and 8 m/s) as factors.

The dryer achieved a drying capacity of 27 kg/hr/batch with a mean moisture reduction rate of 18.89 %/hr. The smoker demonstrated a mean smoking capacity of 27 kg/hr.

In terms of product quality, the physicochemical analysis revealed that the smoked fish produced using a 16 m/s furnace blower and 12 m/s smoke generator speed obtained the lowest mean moisture content with a value of 57.98%. The furnace blower speed and its interaction with the smoke generator blower speed have significant effects on moisture content. On the other hand, the smoked fish produced using a 12 m/s furnace blower and 8

m/s smoke generator speed obtained the lowest mean water activity with a value of 0.881. Both blower speeds and their interaction significantly influenced water activity.

Sensory analysis indicated comparable acceptability scores, with the mean overall acceptability score of "like moderately". Microbiological analysis reported the absence of salmonella and shigella, with a mean aerobic plate count of 278,888 cfu/g. PAH analysis showed "not detected" levels for PAH compounds, indicating values below 2.00 μ /kg.

The simple cost analysis revealed an initial investment of Php 27,315.00, with a break-even capacity of 13,425.87 kg/yr at a custom rate of Php 5.00 per kilogram. Operating the machine for custom service resulted in an annual net income of Php 54,370.65/yr, yielding a remarkably short payback period of only 0.50 years.

Keywords: smoked fish; dryer; smoker; drying; smoking.
