## **BIOGRAPHICAL SKETCH**

The author, Jhester Maniquiz Gumangan, was born on January 29, 1996 at Brgy. Palusapis Science City of Muñoz, Nueva Ecija. He is the middle child of Mr. Jimmy B. Gumangan and Leticia M. Gumangan.

He Finished His Elementary Education at Palusapis Elementary School in 2008, and his Secondary Education at Central Luzon State University Laboratory High School – Palusapis at Brgy. Palusapis Science City of Muñoz, Nueva Ecija in 2012

He continued his tertier education at Central Luzon State University, Science City of Muñoz, Nueva Ecija where he pursued Bachelor of Science Agriculture major and Crop Science and specialized in Agronomy.

As a requirement for graduation, he conducted his thesis entitled Growth, Yield and Grain Quality of Aromatic Rice (CL1) as Affected by Plant Spacing and Fertilizer Application at the experimental area of the College of Agriculture, Crop Science Department, .Central Luzon State University, Science City of Muñoz, Nueva Ecija,

## ACKNOWLEDGEMENT

To all the people and organizations whom he is in debt and that help and guide the author to achieve his Bachelor of Science in Agriculture thank you.

To his family Mr. Junie B. Gumangan and Mrs. Leticia M. Gumangan for their undying support, understanding, love, care, assistance and financial support. They never failed to assist him in terms of taking care of my needs. They are the author's inspiration to achieve his goal. The author would also like to thank his siblings Jerome M. Gumangan and Judy Lyn M. Gumangan for their encouragement, prayer and support. To his relatives in both sides of his parents thank you.

The author would like to express his deepest gratitude and thanks to his adviser and mentor Dr. Mario B. Agustin and to his critic Mr. Efrilito Jay M. Guittap for the advice, valuable comments, techniques, suggestions for improvements and understanding. They are not just his adviser and critic but they stand as his mentor.

To all faculty of The Department of Crop Science, Sir. Ace Mugssy L, Agustin, Sir Dionce S. Barrientos, Maam Joan A. Bayla, Sir Nemesio V. Tamayo, Sir Charlito R. Juico, and Ma'am Paulina Alavaran for their happy moments that they've shared and support.

To the Department Chairman of Crop Science Dr. Rosemarie T. Tapic, Department Research Coordinator Professor Pacifico Vismonte Jr, to our College Research Coordinator Dr. Ronaldo T. Alberto and to our College Dean Dr. Ernesto A. Martin, thank you for your comments, concern, and suggestions .

To Maam Veronica thank you for teaching him to compute and analyze the variance. Also to Ma'am Paulina Alvaran for giving him time to accomplish his sensory evaluation for his study, Ate Maribel for his moral support and lastly to research and extension office thank you for letting me use their equipment in gathering the author data.

To all friend outside and inside of college of agriculture and SCSM family for their life time happy moments, sharing of their gloomy and cheerful moments and unconditional help.

And to his God Almighty, the author would like to express his deepest gratitude and thanks for His undying love and support, never ending blessings that you have given to the author and courage to finish his study.

**JHESTER MANQUIZ GUMANGAN**

# **GROWTH, YIELD AND QUALITY OF AROMATIC RICE (CL1) AS AFFECTED BY PLANT SPACING AND FERTILIZER APPLICATION**

by

**JHESTER MANQUIZ GUMANGAN**

## **ABSTRACT**

This study was conducted to determine the effect of different planting distance and fertilizer application in the growth and yield of aromatic rice. Three different planting distance: A1 (20 x 20 cm), A2 (20 x 25 cm) and A3 (25 x 25 cm) and three different fertilizer application: B1 (120 – 60 - 60), B2 (10 tons/ha of organic), B3 (60 – 15 – 15 + tons/ ha of organic) were evaluated, following Factorial in Randomized Complete Block Design (RCBD) with three replications.

Results revealed that there was highly significant difference among fertilizer application on panicle length, filled grain per panicle, weight of 1000 grain and grain yield per tons/ha. On the other hand, there are significant difference among plant spacing on percent head rice recovery, productive tiller. No significant difference was observed on the interaction between plant spacing and fertilizer application.

In this study of Aromatic rice (CL1) applied by 25cm x 25cm plant spacing and Recommended Rate of Inorganic Fertilizer consistently produced high percentage in weight of 1000 seeds, computed grain per hectare and in milling recovery data show this treatment combination have better result among nine treatment combination. This treatment can be applied (as it is more practical) to improve the yield of CL1 which is promising while awaiting release.

---
