

**MAJOR PRACTICE ON THE DNA ANALYSIS OF SOYBEAN-NODULATING  
RHIZOBIA AT THE UNIVERSITY OF MIYAZAKI, JAPAN**

**JOHN PHILIP DE LIMA TANAY**

An Undergraduate Major Practice Manuscript Presented to the Faculty of the  
Department of Soil Science, College of Agriculture,  
in Partial Fulfillment of the Requirements  
for the Degree

**BACHELOR OF SCIENCE IN AGRICULTURE  
SOIL SCIENCE**

**JUNE 2017**

## **BIOGRAPHICAL SKETCH**

The author was born on May 6, 1995 in Tres Reyes, Bato, Camarines Sur. He was the youngest among the five children of Mr. Felipe Landagan Tanay and Mrs. Demetria De Lima Tanay.

He started his elementary education at Bato North Central Elementary School in 2003 and finished it at San Vicente Elementary School in 2008. He completed his secondary education at San Vicente High School now called Bato National High School. In 2013 he was admitted in Central Luzon State University, where he enrolled Bachelor of Science in Agriculture (BSA) Soil Science as major field of specialization.

In his college life he was active in extracurricular activities that developed his leadership skills. He acquired various positions in the College of Agriculture Student Government (CA-SG) such as: representative for 1<sup>st</sup> year BSA CA-SG, CA-SG secretary (2014-2015), and Vice Governor of CA-SG. He was also appointed as the Course Representative for BSA students for two consecutive years (2014-2016) in the Congress of Campus Leaders, the law-making body of the Collegiate Student Body Organization. He also served the Soil Science Society as president during the School Year 2016-2017.

## ACKNOWLEDGEMENT

The author would like to express his deep appreciation to the following who gave significant contribution for the completion of this work.

To Almighty God for giving him wisdom in every decisions he make and strength to face every conflict he encountered.

To his mother Mrs. Demetria D. Tanay for the full support. The author thanked her for all the love, patience, everlasting prayers and for taking good care of him. He would also like to thank his brothers and sister for giving him advices, motivations, and support.

To his adviser Prof. Florida C. Garcia for her untiring support to make this work a success and for sharing her time, every time he needs her.

Dr. Apolinario L. Domingo, Department Major Practice Coordinator, for his initiative and encouragement that made this Major Practice in Japan into a reality.

Dr. Purisima P. Juico for the support and motivation she gave to the author and to other co major students.

Dr. Federico O. Perez, Dr. Ariel G. Mactal, and Prof. Ferman T. Feigelan for giving the author knowledge in Soil Science and in life decision making.

Dr. Yuichi Saeki, Host Professor at University of Miyazaki for the success of the major practice conducted in their country. The author and co major practice students in Japan thanked him for providing all their needs and for the wisdom he shared with them.

Ms. Maria Luisa T. Mason, Major Practice Coordinator at University of Miyazaki

for sharing her expertise on DNA analyses and for accompanying the author in the laboratory. The author also thanked her for the pieces of advice and knowledge in making this work.

He would also like to thank his batchmates (BSA 1-2 SY 2013-2014) for giving him a wonderful start in college.

To the Agriculture Dorm family headed by Sir James Espiritu (Dorm Parent) for the joy, laughter, and unforgettable experiences they shared together.

To all the members of the Soil Science Society for the memories they shared in conducting their activities.

To nigger friends for the ideology, support and motivation. The author also thanked them for being there in the time of loneliness and joy which the author will always treasure for the rest of his life.

**JOHN PHILIP DE LIMA TANAY**

## LIST OF TABLES

TABLE		PAGE
1	TAKARA restriction enzymes used in the major practice	24
2	Morphological characteristics of rhizobial isolates in YMA+CR	27
3	Morphological characteristics of Rhizobium and Bradyrhizobium isolates in YMA+BTB	28
4	Negros isolates in 16S rRNA restriction fragments grouped in HaeIII digestion.	33
5	Negros isolates in 16S rRNA restriction fragments grouped in HhaI digestion.	34
6	Negros isolates in 16S rRNA restriction fragments grouped in MspI digestion.	35
7	Negros isolates in 16S rRNA restriction fragments grouped in XspI digestion	36
8	Leyte in isolates 16S rRNA restriction fragments grouped in HaeIII digestion	37
9	Leyte isolates in 16S rRNA restriction fragments grouped in HhaI digestion	38
10	Leyte isolates in 16S rRNA restriction fragments grouped in XspI digestion	39
11	Leyte isolates in 16S rRNA restriction fragments grouped in MspI digestion	40
12	Negros 16S PCR-RFL result summary	42
13	Leyte 16S PCR-RFLP result summary	44
14	Soil pH and Ec reading of samples collected from Leyte and Negros	46

## LIST OF FIGURES

FIGURE		PAGE
1	Colonial growth of rhizobia in YMA + Congo Red	27
2	Photo of Rhizobium (left) and Bradyrhizobium (right) isolates in YMA + BTB	29
3	Successful amplification of Negros Samples isolates 1-24	30
4	<i>HhaI</i> 16S restriction fragments of Negros isolates a)1-24, b)25-32, 44-47, 57-64, and c) 33-43, 48-56	31
5	<i>MspI</i> 16S rRNA restriction fragments of Negros isolates a)1-24, b) 33-43, 48-56, and c)25-32, 44-47, 57-64	31
6	<i>HaeIII</i> 16S rRNA restriction fragments of Leyte isolates a) 1-4, b) 5-28, d)29-46, 51-56,67, and c) 59-63, 68-70, 47-50, 64, 57, 58, 66, 65	32
7	<i>XspI</i> 16S rRNA restriction fragments of Leyte isolates a) 1-4, b) 5-28, c) 29-46, 51-56,67, and d) 59-63, 68-70, 47-50, 64, 57, 58, 66, 65	32
8	Cluster percentages of Negros isolates	43
9	Cluster percentages of Leyte isolates	44
10	Map showing the Cluster percentages of Negros and Leyte isolates	45

## LIST OF APPENDICES

APPENDIX		PAGE
1	Description and schedule of activities	58
2	Preparation of vermiculite pots and N-Free medium for nodulation test	59
3	Nodulation Test	60
4	Isolation from stab culture (Clean Bench)	61
5	Preparation of Yeast Extract Mannitol Agar/ Broth (YMA/YMB)	62
6	Preparation of HEPES-MES medium	64
7	PCR amplification of 16S rRNA target gene	66
8	RFLP analysis	67
9	Electrophoresis, staining, and visualization	69
10	Determination of soil pH (1:2.5 water extraction)	70
11	Determination of soil electrical conductivity (1:5 water extraction)	71

## LIST OF APPENDIX FIGURES

FIGURE		PAGE
1	Seed preparation: a-b) seed imbibition and c-d) seed surface sterilization	72
2	Nodulation test preparation a) T-Plex filled with vermiculite up to 900 mL mark, b) Nitrogen free solutions mixture preparation, c) adding of nitrogen free mixture to vermiculite media, and d) sterilized vermiculite media with N-free solutions	73
3	Nodulation test: a) weighing the vermiculite media, b) sowing of surface sterilized seed on vermiculite with soil sample, c) growth chamber, d) thinning of seedling, and e) watering with sterilized distilled water	74
4	Isolation and Culture: a-b) streaking of samples in YMA+CR and YMA+BTB, and c-d) HMB and YMB culture	75
5	DNA extraction from HMB culture: a) centrifugation, b) decantation, c) adding of protease K and BL buffer, and d) incubation	76
6	PCR amplification: a) thawing of samples and reagents, b) mixing the reagents for reaction mixture, c) flashing of reaction mixture, and d) amplification in PCR Machine	77
7	RFLP digestion: a) thawing of PCR products and enzymes, b) reaction mixture, c) flashing of reaction mixture and, d) incubation at 37°C	78
8	Electrophoresis and visualization: a-b) loading of samples in agarose gel for PCR and RFLP products, c) electrophoresis chamber, d) ethidium bromide, e) LAS 4000, and f) illuminated bands	79
9	Soil pH Analysis: a) weighing of samples, b) addition of water in samples, c-d) shake bath, e) reading of samples, and e) rinsing of the electrode	80

10	Soil electrical conductivity analysis: a-b) shake bath of sample, and c-d) Electrical conductivity meter reading	81
